Alfa Romeo recommends genuine lubricants.

The CO₂ and fuel consumption values are determined on the basis of the measurement / correlation method referring to the NEDC cycle as per Regulation (EU) 2017/1152-1153.
The CO₂ and fuel consumption values obtained according to applicable regulation are indicated in order to allow the comparison of vehicle data. The homologation values of CO₂ and fuel consumption may not reflect the actual values of CO₂ and fuel consumption, which depend on many factors related, by way of example but not limitation, to the driving style, the route, the weather and road conditions, the condition, use and equipment of the vehicle.
The indicated value of CO₂ and fuel consumption refers to the versions of the vehicle with the highest and the lowest values. Those values may change with the subsequent configuration depending on equipment selected and/or size of tires selected.

The indicated values of CO₂ and fuel consumption are not definitive and may evolve as a result of changes in the production cycle; more up-to-date values will be available at the selected official dealer of the FCA network.
In any case, the official values of CO₂ and fuel consumption of the vehicle purchased by the customer will be provided with the documents accompanying the vehicle.
In cases where the values of CO₂ and fuel consumption are relevant for the purposes of calculating taxes and duties related to the vehicle, reference should be made to the applicable laws in each country.
